Paris, April 3rd., 1959

64

MEMORANDUM BY THE GERMAN DELEGATION
ON THE EXPORT TO HUNGARY OF AN HHF
STANDARD SIGNAL GENERATOR

The German authorities have received an application to license the export to Hungary of

- 1 UHF Standard Signal Generator
Type SDAF,
covered by item 1529 a) ,
total value \$ 1864.-

This measuring-instrument which operates at a frequency range of 170-620 mcs is specially designed for the production and verification of Television-receivers in band 3 and 4. For this special use, the set is constructed in such a way that it can be amplitude and frequency modulated at the same time, thus providing the conditions for testing the performance of limiters.

As a further special feature for measurements on TV-receivers, the signal generator produces the picture carrier and the frequency modulated sound-carrier.

As the frequency range is limited to 620 mcs., the signal generator cannot be used for special military purposes, as e.g. in the field of radar operations. This case is submitted under the procedure of Cocom Doc. 1473 A).

In view of the civilian end-use of the apparatus the German authorities wish to grant the licence and trust that no objections will be raised against this export. The German Delegation would appreciate to have the views of governments at an early date.
